

The EasyChair Workstation

Turn your EasyChair or recliner into the ultimate ergonomic WorkStation.

Desks are fine for paperwork, but ... Why be chained to a desk to use your computer?

Surf the net for hours in unparalleled comfort!

The Monitor Jack is the heart of the **EasyChair WorkStation**

The Monitor Jack™ is a rigid base constructed of Heavy duty Industrial Steel. You have never seen anything like it.

The Monitor Jack™ base supports your selection of monitor arms. Monitor arms are available for any size CRT up to 90 Lbs.

All monitor arms feature Fingertip positioning and Pullout Keyboard support. (Show here with a Height adjustable Arm).

The EasyChair Workstation Adapter fits under and around your easychair or recliner and takes up less than a foot of space more than your recliner and table now take up.

Your monitor is then easily positioned over your EasyChair for maximum comfort. The monitor screen almost seems to float in front of your eyes.

Can also be set up as a Dual-Use EasyChairWorkStation. By swinging the monitor arm around, it naturally faces out and can be used with even a light duty "laptop" type desk because all of the weight of the monitor is supported by the Monitor Jack. The best of both worlds!

Is Using your computer a Pain?

A perfect solution for people who can not sit at a traditional work station for any length of time because of a Physical Condition or Disability. If you are able to sit in a recliner you can now use you computer again! You recliner is comfortable because it fully supports your body. Your arms fall naturally to the arm rests and are fully supported as you use your mouse. The very Definition of Ergonomics! Many of our customers are using The EasyChair WorkStation™ because it helps them overcome the physical discomfort of using a traditional workstation. It can even be used beside an adjustable bed.
