

The SideKick EasyChair WorkStation

Finally a truly comfortable way to use a laptop. Laptops are great for portable computing, but are not optimized for comfort. The keyboard is small, the cursor control is marginal, and the screen is too low to use comfortably.

Now you can use a real keyboard and a real mouse at an adjustable height. The Laptop and its LCD display are supported by an adjustable platform to raises display above the keyboard height to a more natural viewing level.

And you get all of the advantages of the Sidekick keyboard podium and its offset weighted base. Use it at either a regular chair beside your desk, or next to your easychair, recliner or couch. Just swing it out of the way when you are done. The base is on casters to move your workstation where you need it. Perfect for your Home, Office, or Home Office.

Reclaim your desktop. Move your laptop, keyboard and mouse to our laptop workstation and use it next to your desk, or roll it out of the way when you are done.

A great place to "retire" a road warrior laptop which may no longer be able to take the rigors of travel, but still works fine plugged in.

With an 8 inch height extension, can be used as a stand up workstation, or next to a drawing table or counter top.

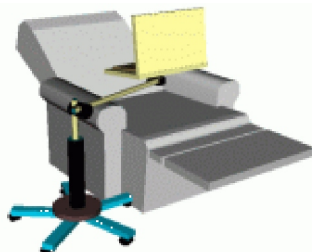

Also works great for assistive technology applications. Perfect for use next to a bed, or from a wheelchair or recliner.

The contour-shaped top in a durable laminate will accommodate most keyboards made today, including Microsoft's Natural Keyboard. Top Surface Dimensions are 12 x 34 inches.

The height is easily changed over a 10inch range with a simple lever. The range of height adjustment is 21.5 to 31.5 inches(55 cm. to 80 cm.)

Also available is a Height Extension tube for the Sidekick series which increases the height of the table top by 8 inches for use with a bed or a stand-up work surface. Range of height adjustment is changed to 29.5 to 39.5 inches with 8 inch extension.

Also available are our Sidekick workstations for LCD screens, and our Boom Arm Starbase series for Laptops and LCD use.
